• Description

Elementary Differential Equations and Boundary Value Problems 11e, like its predecessors, is written from the viewpoint of the applied mathematician, whose interest in differential equations may sometimes be quite theoretical, sometimes intensely practical, and often somewhere in between. The authors have sought to combine a sound and accurate (but not abstract) exposition of the elementary theory of differential equations with considerable material on methods of solution, analysis, and approximation that have proved useful in a wide variety of applications.

• Table of Contents

- Preface
- Introduction
- First-Order Differential Equations
- Second-Order Linear Differential Equations
- Higher-Order Linear Differential Equations
- Series Solutions of Second-Order Linear Equations
- The Laplace Transform
- Systems of First-Order Linear Equations
- Numerical Methods
- Nonlinear Differential Equations and Stability
- Partial Differential Equations and Fourier Series
- Boundary Value Problems and Sturm-Liouville Theory
- Answers To Problems
- Index
